FOR IMMEDIATE RELEASE

St. John's Company named one of Top 30 Places to Work in Atlantic Canada

St. John's, NL – The Newfoundland and Labrador high-technology corporation C-CORE, was today named one of the Top 30 Places to Work in Atlantic Canada by Progress Magazine. This follows on the heels of two other prestigious awards C-CORE won over the past two years: the Newfoundland & Labrador's Employer's Council *Employer of Distinction Award* and The Provincial Government's *Distinction in Innovation Award*.

C-CORE President and CEO, Dr Charles Randell, says "C-CORE longevity and success is due to our outstanding staff. With its roots in Memorial University, C-CORE has grown to provide engineering R&D world-wide. Our products are generated solely from the intellect, the creativity and the experience of our staff. We put considerable effort into attracting and retaining the best of the very best, the brightest of the very bright. This award, particularly since it's based on a survey and feedback from C-CORE staff is another indicator that we're on the right track." Dr. Randell states this award reflects the continual efforts of C-CORE's management and staff to create a positive, supportive rewarding and enjoyable experience while working hard to make this Newfoundland and Labrador corporation a world leader.

In addition to winning many wards over the past number of years, this year C-CORE celebrates its 35th anniversary. It is one of Canada's leading research and development corporations with 75 employees providing innovative engineering solutions to national and international clients related to Ice Engineering, Geotechnical Engineering and Radar & Vision Systems.
